## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Satoh et al. in view of Tribbey et al.

Regarding claim 1, Satoh et al. show a fixing structure of a miniature vibration motor (Figure 3 and 4), comprising:

- A seat plate (9) having electronic elements (16, 17) and at least one line connecting point (62);

Application/Control Number: 09/852,082

<sup>4</sup> Art Unit: 2834

- A circuit board (41) having a conducting line (47) and at least one conducting connecting point (49), the conducting connecting point soldered to the line connecting point of the seat plate, so that the circuit board (41) is fixed on the seat plate (9), and so that lines between the circuit board and the seat plate are conducted;
- A rotor having a permanent magnet (56).
- A stator seat wound with a coil (46), and connected to the conducting line of the circuit board by a drawing wire (Figure 3), the stator seat having poles (45) induced with the permanent magnet of the rotor; and
- A housing (21) receiving the stator seat and the rotor therein.

Satoh et al. do not show the circuit board (41) having a sensor.

Tribbey et al. show the circuit board (68) having a sensor for the purpose of monitoring the position of the rotor.

Since Satoh et al. and Tribbey et al. are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to add a sensor to the circuit board as taught by Tribbey et al. for the purpose discussed above.

Regarding claim 2, it is noted that Satoh et al. also show the seat plate (9) being formed with a seat hole (where lands 62 located) for securing the circuit board therein.

Application/Control Number: 09/852,082

' Art Unit: 2834

Regarding claim 3, it is noted that Satoh et al. also show the rotor being formed with a slot (hole for shaft 53), such that the center of gravity and the center of rotation of the rotor are not in concert with each other.

Regarding claim 4, it is noted that Satoh et al. also show the housing (21) being formed with cutouts (58), the circuit board has lugs locked in the cutouts of the housing.

## Information on How to Contact USPTO

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dang D Le whose telephone number is (703) 305-0156. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nestor Ramirez can be reached on (703) 308-1371. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9318 for regular communications and (703) 872-9319 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1782.
